1-800-JETTING

Mini-Jet Kit

The **U.S. Jetting** Mini-Jet Kit is the most useful accessory for any type high pressure sewer jetting unit for sewer, drain pipe and conduit cleaning applications. Available in lengths from 50 to 300 feet, all kits feature 3 rear, 1 forward ball jet nozzle. Designed for use in 2 to 6 inch pipes, the Mini-Jet excels in negotiating bends and sweeps. Mini-Jet Kits are designed and manufactured for operation up to 4,000 PSI. Connection of Mini-Jet Kits to high pressure jetting units is quick and easy for increased productivity.

Compared to the standard **U.S. Jetting** RPD nozzle series, the smaller Mini-Jet Kit with a Ball Jet nozzle is able to penetrate and clean restricted areas.

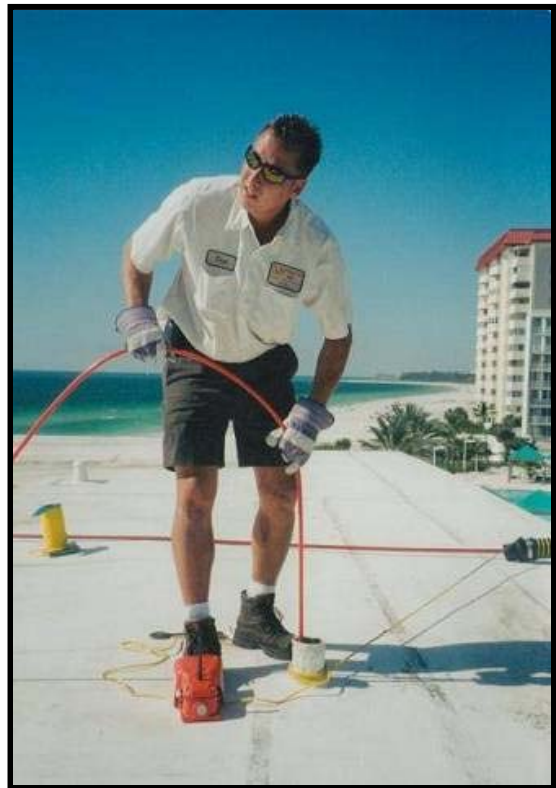

Available Ball Jet Configurations

- 3 Rear, 1 Forward (with kit)
- 6 Rear
- 3 Rear

Mini-Jet Kits provide the ultimate in high pressure jetting hose technology for drain cleaning versatility. This allows the nozzle and hose the ability to jump 3 and 4 inch traps or negotiate multiple bends for difficult cleaning applications. Combined with the **U.S. Jetting** Gen II Wireless Remote Control, Mini-Jet Kits provide users the ability to work from remote elevated areas with complete jetter unit control.

Reversibility

A key feature of the Mini-Jet Kit is the ability to reverse the nozzle and high pressure hose connections as required. Operators can use the Mini-Jet Kit to properly clean branch lines (especially lines containing traps) by running the Mini-Jet from an upstream opening to a downstream access point. Then by reversing the nozzle and hose connections, full force jetting can be achieved by jetting in the proper direction. No longer are forward firing nozzles required to “push” debris down a branch line. Mini-Jet Kits can also be adapted for towing CCTV push type cameras through branch lines or threading tow cables.

Optional Nozzles For Mini-Jet Kits

In addition to the standard ball jet nozzles, **US Jetting** has a wide range of specially designed nozzles for use with the Mini Jet Kit.

A Chisel Point nozzle (top) with 3 forward firing jets and 3 rear firing jets is available for penetrating and removing the toughest blockages.

Rotary or spinning nozzles are available in several different configurations. Spinning water jets clean the entire internal pipe wall surface. Rotary nozzles can be specified with all rear firing jets for maximum propulsion or with a mix of rear jets and perpendicular firing jets.

Mini-Jet Hose Kit & Carry Reel

An optional Carry Reel is available for Mini-Jet Hose Kits. The Carry Reel has a 300' hose capacity, high pressure hose reel swivel, carry handle all mounted upon a rugged stable base. A hard mount hold down base with quick release is also available for mounting on any type of jetting unit.
